Live without limits.
JIVE® UP
ELEVATE YOUR
EXPERIENCE

ELEVATE YOUR EXPERIENCE

Discover the next evolution of the JIVE family - the JIVE UP. Combining the indoor agility and outdoor high performance of the JIVE-M with a multi-functional seat, you're now able to enjoy both seated and standing positions from the comfort of your JIVE UP. With a simple touch of a button, be eye-to-eye with the world around you and enjoy all of the benefits of a standing wheelchair - combined with the freedom and independence that only the JIVE UP can provide.

Stand up for the life you want to live with the JIVE UP.

THE BENEFITS **OF STANDING...**

The JIVE UP allows for spontaneous and frequent utilisation of standing. This offers many indicated benefits for your health and everyday life:

- an improved pressure relief for those who may have limited ability to independently weight shift or have to sit for long periods.
- enhancement of functional reach and access to enable participation in activities of daily living.
- improved range of motion and a reduction of the risk of contractures.
- supporting vital organ capacity including pulmonary, bowel and bladder function and improves circulation.
- promoting bone health and reducing the occurance of skeletal deformities by encouring standing.
- reducing abnormal muscle tone and spasticity.

CHOOSE YOUR **SEAT POSITION...**

The JIVE UP utilizes a seat function switch box which enables the user to move into five pre-defined seat positions. Each position can be reached directly out of any current seat position. The five memory seat positions can be programmed with our very simple and unique assignable button function to accomodate each individual needs.

→ **SEAT FUNCTION SWITCH BOX**

The upper button always brings the user towards the memory function as shown on the icon. The lower button will bring the seat back into the "Sitting" position. The „M" function is an fee individually programmable seat postition.

ANY SEAT POSITION **POSSIBLE**

→ RELAX POSITION

Using this function the seat moves into a recline, tilt and legs up position.

→ STAND-UP

This Memory position brings the user into stand up. At a certain forward tilt angle the front castor arm locking mechanism moves in.

→ TRANSFER POSITION

If a user needs to be transferred into or out of the seat, this function provides a forward tilt angle for easy transfers.

→ SITTING

This is the memory position in which the user is going to drive the chair. It is also the "standard" position; all actuators drive into when the joystick is pulled backwards while in"seating/ memory position" mode.

→ LIE-DOWN

This function brings the user into a horizontal lie down position.

// WITH JIVE, GET ALL UNDER CONTROL

You can further customise your Jive by expanding the control system with R-net. Personalise your chair by assigning commonly used commands and settings to a single button.

For conversations on the move, keep tweets and status updates flowing by using the Jive's Bluetooth option to control your smartphone or tablet.

Or control your environment with Jive's Omni controller. Getting ready to watch a film? Dim the lights, select play and turn up the volume – all without your hand leaving the joystick. And, if a joystick's not suitable you can even customise the way you control your Jive with a variety of speciality controls.

SPIDERTRAC® **TECHNOLOGY**

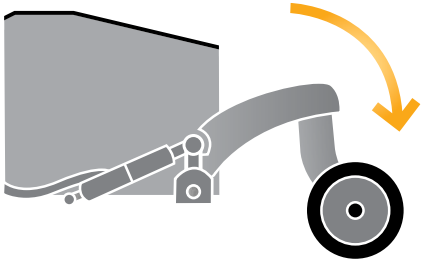
Smooth, safe and comfortable ride across multiple terrains. The innovative SpiderTrac® suspension provides many benefits with one mechanism.

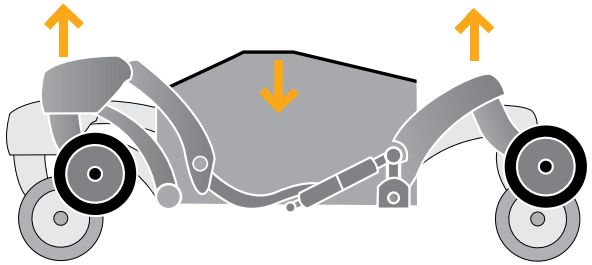
→ **Ready to run the SpiderTrac® video! Check it out!**

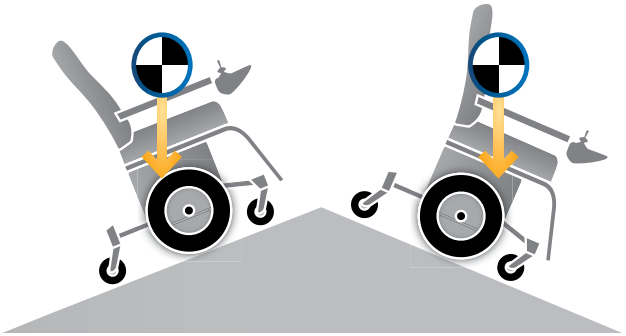
HOW DOES **SPIDERTRAC® WORK?**

SpiderTrac® suspension is a gas suspension system used to dampen the impact without adding pressure to the castors. By maximising the articulation range of the front and rear castors, the Jive M has a spider-like ability to crawl smoothly onto and over steep transitions – so when you're ascending or descending a kerb, the gas dampener cushions the impact of the castor wheel. This ensures not only super-smooth transitions without jolts, jarring and forward pitching but also keeps you seated in a horizontal position.

Because the suspension on the front and rear castors is linked, they move in an opposite direction to compensate for drive wheel movement. So when you're transitioning a slope (or driving from the floor up a car ramp) every wheel maintains contact with the ground, maximising traction. The gas suspension is also used to absorb shock for both castors, providing a more comfortable ride on uneven terrain. You really have to try it to believe it.

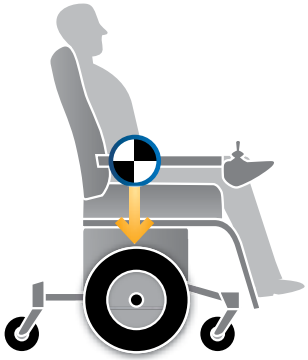


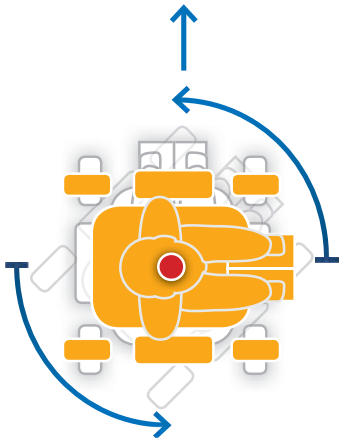




SUPERIOR **MANOEUVERABILITY**

As you don't need to consider additional space for swinging your chair around, the JIVE UP is more intuitive to drive – ideal for those who may have difficulty driving a powered wheelchair or using switches or head controls. Your seated position also adds more weight on the drive wheel – perfect for increasing traction and decreasing sliding when outdoors.





EXCELLENT INDOOR **MANEUVERABILITY**

Because the centre-of-rotation is located directly beneath you, the JIVE M can turn on its own axis, giving an ultra small turning circle for excellent manoeuvrability around the home.

Navigating through doorways, lifts and confined spaces also becomes easier with the JIVE's compact dimensions. The low seat height of 430 mm (with tilt module) helps with access under tables and transportation within vehicles whilst a 90 degree leg angle ensures good leg positioning.

GREAT OUTDOOR **PERFORMANCE**

Don't forget – you're equally at home outdoors with JIVE UP. With its SpiderTrac suspension, you're assured a smooth ride over uneven terrain with superb traction, excellent stability and minimal forward pitching - even when descending 10 cm kerbs!

With speeds of up to 13 kph, powerful 60 or 70 Ah batteries and a range of up to 40 km, high performance power is always at your fingertips. Controlling that power are expandable control systems (with optional R-Net modules) that are ready to interact with the world around you.

JIVE® UP

APPROVED FOR TRANSPORT **IN A VEHICLE**

The JIVE UP is transit tested in accordance with ISO 7176-19 and apporved for transportation in a vehicle. The tests are conducted with a four-point tie-down system.

CRASH TESTED
ISO
7176-19

The JIVE UP offers a wide range of options – Configure the wheelchair to your individual needs – Get the best for you!
For further information please check the JIVE UP order form.

// JAY COMFORT SEATING

This comes as standard and is a range of cushion and back options which provide great support.

// POWERED LEGREST WITH KNEE FIXATION PADS

The powered legrest offers a programmable lenght and angle adjustment for all seat operations. The knee fixation pads are required when a stand-up operation is conducted.

// LED LIGHTS & INDICATORS

Be seen with the JIVE UPs LED bright lights and indicators integrated into the rear body panel for subtle styling.

// ANTI SHEAR BACKREST

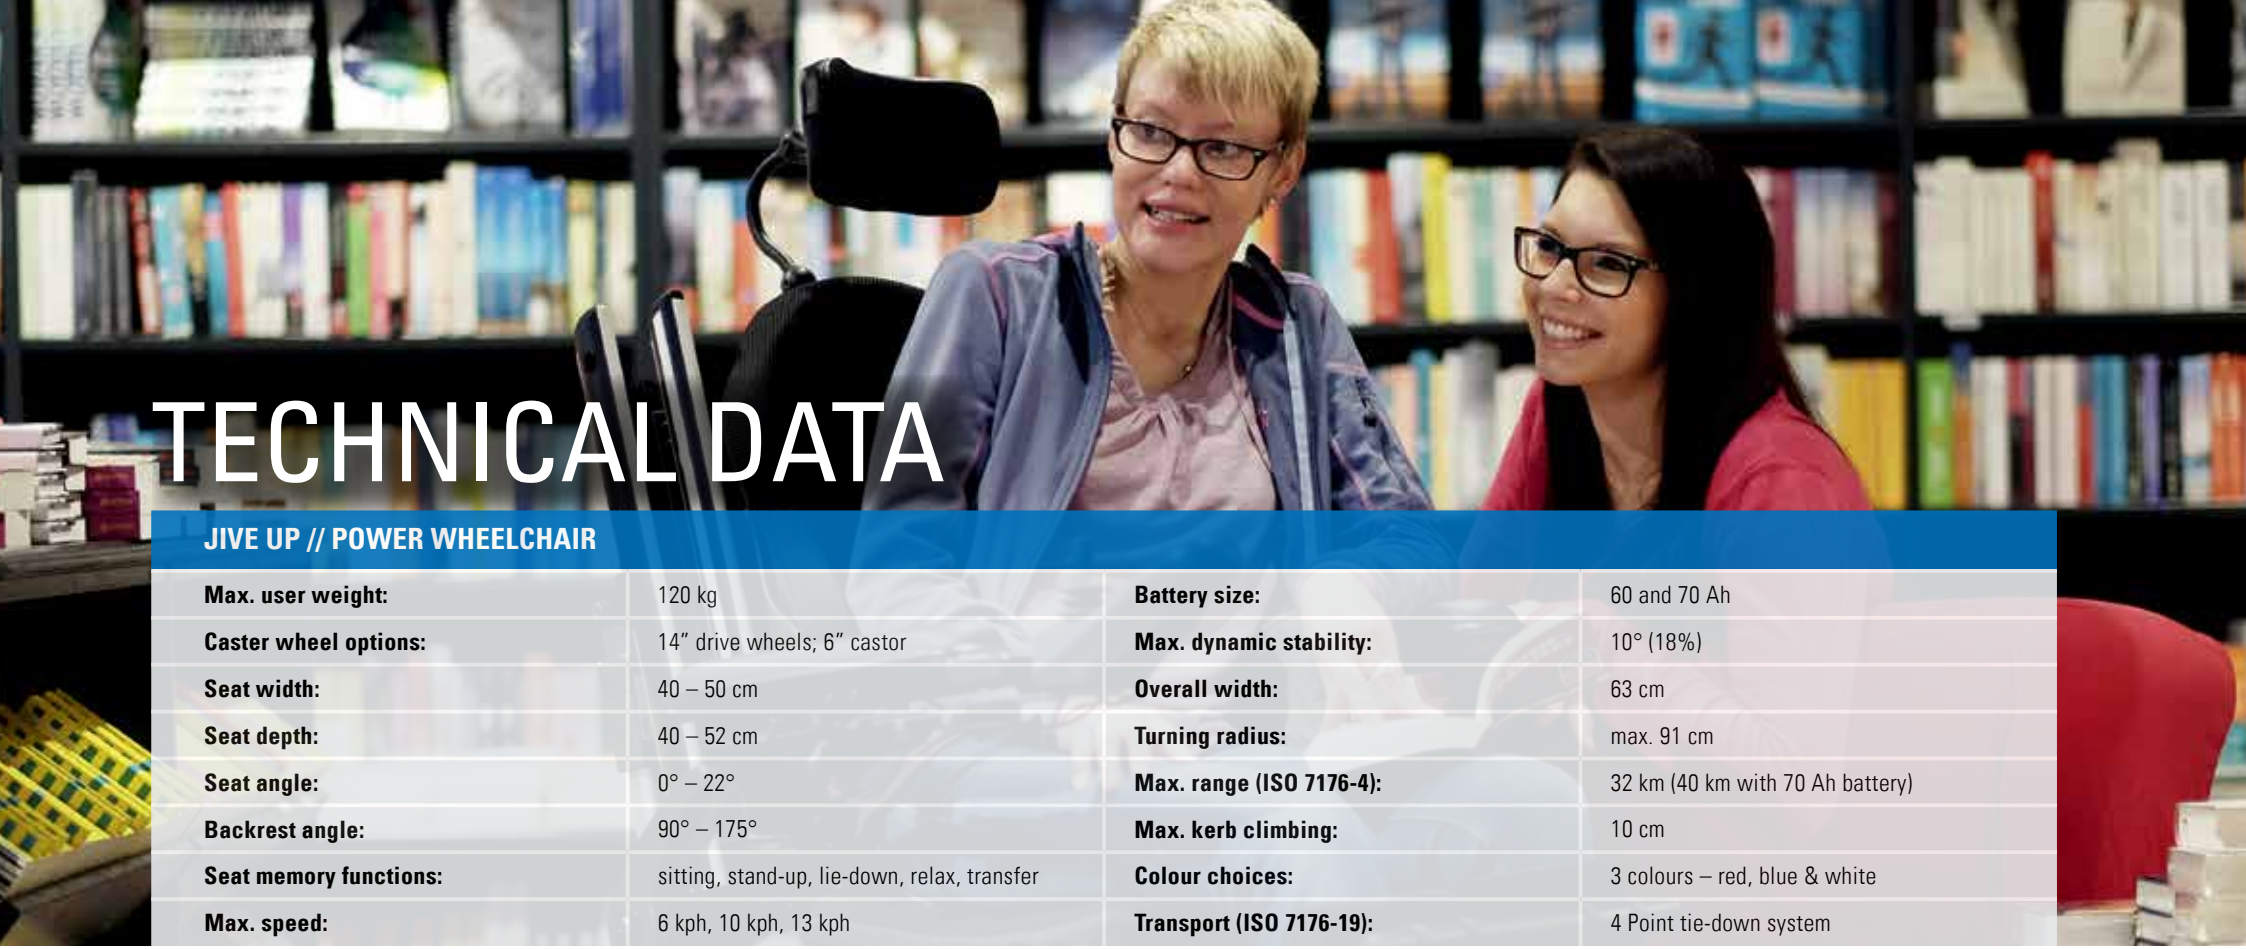
The JIVE UP has a actuator operated 120 mm anti shear backrest. It reduces negative shear forces and compensates for the relative movements of head rests, laterals and chin controls etc. during recline.

// EASY TO SERVICE

It has a low maintenance and service friendly base. Get easy battery or electrical components access with the automatic snap-in seat stay mechanism.

// STRONG 4-POLE MOTORS

The Jive Up comes always with powerful 4-pole motors. It is available as 6 kph, 10 kph and 13 kph version.



TECHNICAL DATA

JIVE UP // POWER WHEELCHAIR

Max. user weight:	120 kg	**Battery size:**	60 and 70 Ah
Caster wheel options:	14" drive wheels; 6" castor	**Max. dynamic stability:**	10° (18%)
Seat width:	40 – 50 cm	**Overall width:**	63 cm
Seat depth:	40 – 52 cm	**Turning radius:**	max. 91 cm
Seat angle:	0° – 22°	**Max. range (ISO 7176-4):**	32 km (40 km with 70 Ah battery)
Backrest angle:	90° – 175°	**Max. kerb climbing:**	10 cm
Seat memory functions:	sitting, stand-up, lie-down, relax, transfer	**Colour choices:**	3 colours – red, blue & white
Max. speed:	6 kph, 10 kph, 13 kph	**Transport (ISO 7176-19):**	4 Point tie-down system
