Base Price € X.XXX,-

Please follow this measuring method:

The following method is recommended on the basis of extensive practical experience. Deviations are possible in individual instances.

Seat Width (SW):

- a) For the user: Allow space between sideguard and hip on each side of the chair (approx. 10 - 20 mm altogether).
- b) On the wheelchair: From outside seat frame tube to outside seat frame tube.

Seat Depth (SD):

- a) For the user: When sitting upright: leave space for 2 - 3 fingers between front edge of the seat upholstery and back of knee (approx. 30 - 60 mm). Care must taken with adj. upholstery.
- b) On the wheelchair: From back tube to front seat upholstery.

Front Seat Height:

- a) For the user: When sitting with 90° knee angle: from back of knee to bottom of shoe sole.
 - b) On the wheelchair: From front of seat tube to the ground. Min. 30 mm longer than user measurement.
- Remember to include the cushion height.

Rear Seat Height:

On the Wheelchair: From back of seat tube to the ground.

Note: Max. seat height difference rear to front is 110 mm

Back Height:

- a) For the user: From the seat, including cushion, to be no more than 10 - 20 mm below the lower shoulder blade.
- b) On the wheelchair: From back of seat tube to upper edge of backrest upholstery.

Note: The user's ability to sit upright has a major influence on the back height and it can therefore differ considerably

Back angle:

Important: The back height depends on the degree of disability. 0° is the angle 90° to the ground. Negative angles are <90° and positive angles are >90°.

Centre of Gravity:

On the wheelchair: From the back tube to the middle of the axle plate.

Technical Data

Max. Overall Height:	1100 mm
Max. Overall Length:	1150 mm
Overall Width:	SW + 240 mm
Weight:	48 kg

Product is crash tested according to ISO 7176-19 and therefore approved for transportation in a vehicle in combination with crash test option. For transport without a user, fix the chair safely in the vehicle (e.g. car or plane).
