WE BELIEVE IN...

**PUSHING THE LIMITS, CHALLENGING
THE CONVENTIONAL, BREAKING
DOWN BARRIERS
AND EMPOWERING PEOPLE.**

In 1988 the founders of RGK had a vision to positively change the way wheelchair users would live forever by creating made to measure wheelchairs that were light and reliable in order to improve independence and equality.

As a result, the opportunities to be empowered today have never been higher, whether it's a Paralympic legend, TV super star or what you dreamed of growing up.

We are so proud and dedicated to continue this vision, by offering our customers new and exciting products with exceptional service and support. We look forward to supporting your journey whatever it may be.

WE ARE MADE TO MEASURE

Respecting your individuality is our passion.

WE ARE EXPERTS

Sharing our knowledge is our pastime.

WE ARE PERFECTIONISTS

Achieving the highest quality is our aim.

WE ARE AT YOUR SERVICE

Creating your perfect wheelchair is why we exist.

WE ARE MARKET LEADERS

Pushing the boundaries in design is standard.

WE ARE PERSONAL

Supporting your journey is guaranteed.

WE ARE RCGK

► ► ► ► **THE PROBLEM: POOR FITTING WHEELCHAIRS**

THE ISSUES:

STANDARD SIZES

Configurable wheelchair sizes can be limiting as they do not fit everyone individually. Many riders are in a wheelchair that does not fit them correctly.

LIMITED OPTIONS

Some wheelchairs can be basic in design and have limited options. This can restrict the ability to become more active and may not meet the user's individual requirements.

HEAVY AND LARGE

Not all wheelchairs are optimised to provide the most light and efficient solution. They can be large in size, use low cost materials and have a modular design which adds weight to the chair so more energy is needed to push, manoeuvre and lift.

THE EFFECTS

POOR POSTURE

Poor fitting wheelchairs can force the pelvis and spine into positions which create poor posture which, if maintained over time, could cause severe health problems including: fatigue, pain, infections, tissue breakdown, respiratory problems and persistent injuries.

DISCOMFORT

Being uncomfortable reduces confidence and increases the risk of health problems and pain which riders may experience in an ill fitting wheelchair.

REDUCED PERFORMANCE

A heavy wheelchair can limit its performance and make it difficult to use, particularly if the biomechanics are not optimised. More energy is needed to propel and manoeuvre which increases fatigue and puts more stress and strain on the upper body.

► ► ► ► ►

THE SOLUTION: MADE TO MEASURE WHEELCHAIRS

WHAT IS MADE TO MEASURE

INDIVIDUAL MEASUREMENTS

Over 30 individual measurements are taken of the rider in the wheelchair, so that it fits their individual requirements.

ERGONOMIC OPTIONS

A wide range of ergonomic options are available to provide optimum comfort, balance and posture.

LIGHTWEIGHT AND COMPACT

The lightest possible solution is achieved using individual measurements, the highest quality materials and a rigid frame design.

BENEFITS OF MADE TO MEASURE

OPTIMUM POSTURE

Sitting in the correct position can significantly reduce the risks of developing pressure related issues in the short and long term. Good health helps promote a more active lifestyle which in turn can positively impact a rider's wellbeing.

OPTIMUM COMFORT

Feeling comfortable increases confidence which helps the rider to achieve an active lifestyle. The likelihood of developing prolonged discomfort, pain and persistent injuries are significantly reduced.

MAXIMISED PERFORMANCE

The rider and wheelchair work in complete unison. This reduces the amount of energy needed to propel and, in turn, increases the wheelchair's efficiency to maximize the rider's abilities.

► ► ► ► **CARBON FIBRE FRAME**

"My Veypr Sub4 is so much lighter than my previous chair and the ride is unbelievably smooth. The ergonomic options have improved my seating position and posture and the extensive made to measure process has ensured the frame fits me perfectly. It's made a huge difference in my day to day life, I didn't expect what I thought were such little details to make such a huge difference to my everyday."

David Weir

TITANIUM FRAME

"I didn't think I would be able to improve my seating position until I got into my new Octane FX. It fits me perfectly, and I feel so much more confident in myself. I never thought small changes would have such a big impact day to day. It's easier to push, lighter and now I can fold it up and take it everywhere! Plus it's so pretty..."

"I honestly feel amazing in my Octane FX."

Sophie Carrigill
PARALYMPIAN

OCTANE SUB4

Oval 70mm x 38mm

Total Weight

9kg

Max User Weight

115kg

AEROSPACE
GRADE
7020
ALUMINIUM

► ► ► ► **USE OF MATERIALS**

Our entire range is made using only the best materials. Our range is comprised of carbon fibre, titanium and aluminium.

CARBON FIBRE has vibration absorbing qualities which can dampen the impact of rolling on uneven surfaces. One of the key benefits of carbon fibre is its strength to weight ratio. So while it is ultra-lightweight it is also extremely strong which means the energy transfer when pushing is extremely efficient to provide a smooth yet rigid ride.

TITANIUM has natural vibration absorbing qualities which allows for a smooth and comfortable ride. It is also known for its exceptional strength to weight ratio, anti corrosion properties and durability. RGK purchase only the finest grades of Titanium 2 and 9 and follow strict procedures in order to use it in our manufacture process.

ALUMINIUM offers a more direct and efficient ride, and is best used when performance is more important than comfort. Often recognised by its versatility, aluminium is also one of the best materials used for making high quality wheelchairs. RGK only uses A7020, the finest grade of aluminium, and on some models carry out a special heat treatment process in order to reduce weight.

► ► ► ► **GLOSSARY**

- **SUB4 TECHNOLOGY.** By making 72 minute but fundamental changes and alterations that many would simply neglect to notice, we have produced ultra-lightweight technology to ensure every Sub4 wheelchair has a guaranteed transport weight of less than 4GK. The key upgrades were made in areas such as upholstery where we use Airtech material which is lightweight but tough and comfortable for longevity. Titanium fixings are used to cut down on weight and prevent corrosion along with many other changes to cut down on weight without compromising on rigidity and stability.
- **TRANSPORT WEIGHT.** Refers to the weight of the product minus wheels and cushion. This is the product weight when transferring into the car etc.
- **PRODUCT WEIGHT.** Refers to the total weight of the product, this is including the wheels and cushion.
- **MADE TO MEASURE.** Refers to the RGK made to measure process. All made to measure products are hand crafted from a straight tube by a single individual. Our wheelchairs are crafted to fit the rider where they can determine measurements to millimetre precision, unlike other made to measure products that are configurable sizes.
- **ERGONOMIC OPTIONS.** Refers to the options that only made to measure can offer. Options include ergonomic backrests, seats and front frame. These are unique measurements that allow the frame to be contoured to the rider's body to aid with balance and comfort.
- **STIFFNESS.** Refers to the rigidity of the frame based in the material type and options. The less stiff a frame is, the more vibrations it absorbs making it a more comfortable ride. While a stiffer frames is more efficient for optimum performance.
- **EFFICIENCY.** Refers to the distribution and transfer of energy while pushing the wheelchair. Less efficient wheelchairs absorb energy and vibration to create a smooth ride whereas more efficient wheelchairs transfer energy directly, so riders need less energy to push.
- **TRI FRAME CHASSIS.** Refers to the brand new frame design that better distributes the energy created during play across more sections of the chair for optimum strength and reliability.
- **Y FRAME CHASSIS.** Refers to the brand new frame design that lowers the center of gravity to deal with direct contact.
- **RIDER EXPERIENCE.** Refers to the rider's wheelchair skills, ability and experience. A new rider could be newly injured or experiencing sports for the first time whereas an experienced rider is looking for optimum performance and/or comfort. RGK has a range of wheelchairs available to cover all levels of experience.
