TS™

Paediatric Folding Tilt and Positioning

Featured With New! Glow in the dark paint

The Zippie TS is the original premier pediatric tilt-in-space chair that is available in either a folding or rigid style frame. The Zippie TS has built-in frame growth with the widest variety of options and is able to accept many seating and positioning solutions.

Tilt-in-Space up to 45 degrees. Available in both rigid and folding frames. Also available with Foot Release Tilt Actuator, which eliminates exposed cables.

Ability to grow the chair frame as the child's needs change. The Zippie TS™ provides growth in both seat depth and seat width.

Optional Folding Frame is a lightweight welded frame construction which allows the frame to compress into a small package that is ideal for transportability and storage in tight places.
