**Please follow this measuring method:**

The following method is recommended on the basis of extensive practical experience. Deviations are possible in individual instances.

**Seat width (SW):**

- a) *For the user:* Allow space between sideguard and hip on each side of the chair (approx. 10 - 20 mm altogether)
- b) *On the wheelchair:* From outside frame tube to outside frame tube.

**Seat depth (SD):**

- a) *For the user:* When sitting upright: leave space for 2 - 3 fingers between front edge of the seat upholstery and back of knee (approx. 30 - 60 mm). Care must be taken with adj. upholstery.
- b) *On the wheelchair:* From back tube to front of seat upholstery.

**Front seat height:**

- a) *For the user:* When sitting with 90° kneeangle: From back of knee to bottom of shoe sole.
- b) *On the wheelchair:* From front of seat tube to the ground . (min. 30 mm longer than user measurement) Remember to include the cushion height.

**Rear seat height:**

- b) *On the wheelchair:* From back of seat tube to the ground.
- Note:** Max. seat height difference rear to front is 130 mm

**Back height:**

- a) *For the user:* From the seat, including cushion, to be no more than 10 - 20 mm below the lower shoulder blade.
- b) *On the wheelchair:* From back of seat tube to upper edge of backrest upholstery.
- Note:** The user's ability to sit upright has a major influence on the back height and it can therefore differ considerably

**Back angle:**

**Important:** The back height depends on the degree of disability. 0° is the angle 90° to the ground. Negative angles are <90° and positive angles are >90°.
