Please follow this measuring method:

The following method is recommended on the basis of extensive practical experience. Deviations are possible in individual instances.

Seat width (SW):

a) *For the user:*

Allow space between sideguard and hip on each side of the chair
(approx. 10 - 20 mm altogether)

b) *On the wheelchair:*

From outside frame tube to outside frame tube.

Seat depth (SD):

a) *For the user:*

When sitting upright: leave space for 2 - 3 fingers between
front edge of the seat upholstery and back of knee
(approx. 30 - 60 mm). Care must be taken with adj. upholstery.

b) *On the wheelchair:*

From back tube to front of seat upholstery.

Front seat height:

a) *For the user:*

When sitting with 90° kneeangle:
From back of knee to bottom of shoe sole.

b) *On the wheelchair:*

From front of seat tube to the ground .
(min. 30 mm longer than user measurement)
Remember to include the cushion height.

Rear seat height:

b) *On the wheelchair:*

From back of seat tube to the ground.
Note: Max. seat height difference rear to front is 130 mm

Back height:

a) *For the user:*

From the seat, including cushion, to be no more than 10 - 20 mm below the lower shoulder blade.

b) *On the wheelchair:*

From back of seat tube to upper edge of backrest upholstery.
Note: The user's ability to sit upright has a major influence on the
back height and it can therefore differ considerably

Back angle:

Important: The back height depends on the degree of disability.
0° is the angle 90° to the ground. Negative angles are <90°
and positive angles are >90°.
