

**BULLETIN DETAILS**

<b>Product Group:</b>	Zippie, Quickie	
<b>Model Affected:</b>	Q300 M Mini Kids, Q300 M Mini Teens	
<b>Effective Date: See Below</b>	<b>Serial No. Effective From:</b>	N/A
<b>Bulletin Subject:</b>	Introduction of Q300 M Mini Kids & Teens	

As part of the continued expansion of the Q-Series Family, we are delighted to introduce the Q300 M Mini Kids and Q300 M Mini Teens to the portfolio.

**Base Overview**

The Kids and Teens seating systems are mounted to the Q300 M Mini base, offering all the benefits of indoor manoeuvrability due to a 52cm wide chassis and true mid-wheel drive technology, as well as the outdoor improvements such as greater range (36km) and increased performance via higher torque motors. Use of this chassis also means more shared components and accessories across the Q-Series fleet, reducing stock holdings and maintaining familiarity with the product.

**Seating Overview**

The Kids and Teens seating is based on the Kids and Teens seating from the Salsa range, meaning it is a tried and tested seating system in terms of quality and durability. However, we have introduced a number of Q-Series options and accessories to improve the clinical application of the product, such as:

- Smaller Seat Sizes
- NEW 14" Drive Wheel Option
- NEW Sedeo Lite Backrest
- Q-Series Armpads
- NEW Z-Finity Footplates
- NEW Tall Sideguards
- NEW Remote Stop Switch
- NEW Capsulated Joystick Mount

**NEW: Smaller Seat Size**

The Q300 M Mini Kids and Teens seating systems allow you to go shorter and narrower than the Salsa M2 Mini version, offering more flexibility and a wider clinical application for smaller clients

- Kids Seating: 11"-16" width, 10"-16" depth
- Teens Seating: 11"-16" width, 14"-20" depth

**NEW: 14" Drive Wheels**

Now available on the Q300 M Mini Kids and Teens is the option for 14" drive wheels.

This option significantly improves the outdoor performance of the base in terms of kerb climbing, terrain handling, ramp transitions and general comfort and stability.

Even better, this is a no-cost option that can be ordered straight from the configurator.

**NEW: Sedeo Lite Kids & Teens Backrest**

Dedicated Sedeo Lite Deep Contour backrests in paediatric sizes offer increased comfort via softer foam, integrated laterals and comfort covers.

As well as Introducing Paediatric sizes of both Sedeo and Whitmyer headrests directly onto the order form.

**NEW: Q-Series Armpads**

We have also introduced the standard Q-Series arm pads on both the Kids and Teens seating.

These arm pads contain softer and more comfortable foam for increased comfort as well as furthering integration with the rest of the Q-Series family

**NEW Option: Z-Finity Footplates**

As children grow and their needs change, the Z-Finity System can be adjusted to provide proper Support of the legs and feet at all times.

Its rotating hardware allows infinite adjustment of the footrests' angle and placement to achieve optimal positioning of the feet, ankles, and knees

**NEW Option: Tall Sideguards**

We received feedback that a lot of clinicians like to utilise the sideguard for mild positioning support, not just to hold the cushion in place, which was not possible the standard Salsa sideguards.

For the Q300 M Mini, we have introduced a tall sideguard option to the order form which allows the sideguard to protrude above even the tallest cushions, allowing for mild positioning support.

**NEW Option: Remote Stop Switch**

We have introduced a new feature to the order form that was previously only available via Built4Me, the remote stop switch.

If the child is driving somewhere they shouldn't, or somewhere potentially dangerous, then the switch will cut the power to the chair and not allow them to travel any further.

This cannot be overridden by the child until the button is released, and as it is fitted inside the base it is also tamper proof

**NEW Option: Capsulated Joystick Mount**

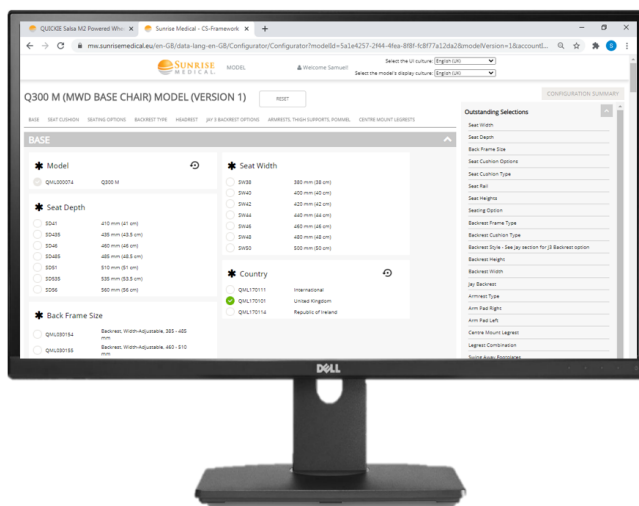

Taken from the Adult Q300 M Mini, the capsulated joystick mount is a swing away joystick that can be swung all the way to the outside as well as the inside, allowing the user to get closer to tables, desks and around tight environments.

For a paediatric user, this can also offer a cost effective midline driving solution, as the joystick can be locked in any position you require.

**Now Available on the Configurator**

Both products are also available to order directly from the configurator, rather than via a paper order for or via B4M like the Salsa version. This reduces order processing time, shows no-go's and pricing in real time, and allows you to save quotes, orders and templates.

**Next Steps**

To arrange a demonstration of these products please contact your Area Sales Manager.

Alternative, if you have a client in mind that would benefit from the features mentioned above, again please contact your Area Sales Manager who will be able to support an assessment in the field

**For more information or for any Demo Stock requests please contact your local Area Sales Manager.**
