

# 4 STEPS TO A HEALTHY BATTERY

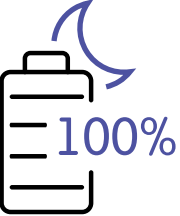

## 1

### Charge every day

Charge even on days with low battery use. Plug the charger into your chair and then into the outlet. Make sure power is on at the wall if it's a switched socket.

## 2

### Fully charge overnight

Don't worry about overcharging, your smart battery charger is voltage limited and shuts off upon reaching capacity.

## 3

### Don't undercharge

It reduces capacity, shortens run time and causes premature battery failure. Instead, charge for at least **8 hours** to reach **80%** capacity (or longer for 100%).

## 4

### Enhance battery life

Regain lost capacity from undercharging by performing a **12-hour charge** at least once a week.
